

Elephant Door Modification

Catalog # 46894

Design ½" Vertical Stainless Channels to replace one side of each Elephant Door.

304 Stainless Steel materials and fasteners to be used.

All SS Sheet plates will be eliminated of sharp edges.

Approximate overall size of Channels are ~4-1/2" wide 3-1/2" deep x 162.5" long.

Install on one side of door and install on the other door on opposite side. This will create a barrier when doors are shut from Elephant parts and air moving through.

Lower portion of both doors on outside wall will need new SS Plates.

Lower Plates are ~29-1/2" long x 7" tall, with various holes for attaching.

Use SS Fasteners for all SS Plate installation. Carriage head bolts ~4-3/4" long.

C2SI will source rubber gasket material to replace existing.

Additional Rubber Seal flaps to be installed on both doors to create more seal.

Install new Stainless Steel flat bar batons to hold rubber seal flaps.

Vertical seal retainer installed to hold seal tight to new SS Channels.
