

Socialization Rack

6.25sf

Catalog # 41020

The Socialization Rack is constructed of all #304 stainless steel. One-Over-One configuration easily allows horizontal and vertical pairing. Full height dividers on each side of the cage provide 3 levels of socialization; visual, grooming, and solid respectively. Midsection components are removable and include a dry. When removed, the mid section is replaced with a wire panel half floor/full perimeter rod. The squeeze is guided by Tivor Hot bearing blocks for smooth and quiet operation, and the single handle design doubles as a perch. All doors, hinged and sliding allow for use of padlocks; including the horizontal animal door on each main cage door. Accessories include a hinged waterline, water bottle holder, a removable feed box, ID card, and ID code.
