

Pairable Swine Cage

Catalog # 42843

Constructed of all #304 stainless steel, the swine cage offers 8 square feet of interior floor space. Cage walls consist of 3/8" diameter rod on 1-1/2" center; including an access door on the front of the cage. The access door includes a removable "J" feeder box that sits approximately 5" off of the ground.

An adjustable waterline with a quick disconnect and drain can also be found on the access door. There is no top frame member on the access door. This allows a person to walk through upright.

Pairing mechanism and removable side panels allow multiple cages to be combined, and increase square footage. Provisions for a center divider are present, allowing the cage to be separated into two sections. Waste deflector / splash guard is located at the rear of the cage.

Overall dimensions: 34" wide x 40" deep x 56" tall

Aqua Grate Flooring

5" SS Casters, two locking

Bead Blasted to a matte finish

Autoclavable
