

Shelter Rack

Catalog # 40892

This unit was specifically designed to provide temporary housing for animals that need to be separated, but not isolated, from the other members of the colony.

The cart has large wheels and a telescoping handle to ease movement over uneven ground.

The telescoping handle can be used on either end of the cart.

The two cages are separated with a perforated aluminum removable divider for socialization or to increase cage size.

The cages shown have removable water bottle holders mounted to the horizontal sliding animal doors.

Each cage has perches and squeezes.

All moving parts have SS spring loaded latches.
